EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

The following is an Examiner's Statement of Reasons for Allowance: The references cited on the attached forms PTO-892 and PTO-1449 represent the closest prior art known. None of these prior art documents disclose or reasonably suggest a method of creating refractive index changes within a substrate material (such as a glass material doped with rare earth ions), wherein the substrate is irradiated with a pumping light having a wavelength longer than the ultraviolet (UV) portion of the spectrum, and ultraviolet (UV) light is then generated within the substrate causing a defect in the substrate which results in a change in refractive index therein. The prior art also does not disclose or reasonably suggest a substrate resulting from such a method. Regarding claims 29-34 (which do not require that the pumping light have a wavelength longer than the ultraviolet (UV) portion of the spectrum, except for claims 30 and 31), the prior art does not disclose or suggest a method of creating refractive index changes within a glass substrate material doped with fluorescent ions by pumping the substrate with radiation, the fluorescent ions then responding to the pumping radiation by generating ultraviolet (UV) light which causes defects in the substrate resulting in a change in refractive index therein.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Teachings of pumped optical substrate materials (some rare earth doped) which cause different wavelength generation through an upconversion mechanism can be seen in U.S. Patent 5,436,919 to Chwalek et al, U.S. Patent 5,786,102 to Paz-Pujalt et al, U.S. Patent Application Publication 2003/0011751 to Sakata et al, U.S. Patent Application Publication 2003/0118841 to Horne et al, and U.S. Patent Application Publication 2004/0037538 to Schardt et al. None of these documents, however, disclose the generation of ultraviolet (UV) light within the substrate in order to cause defects in the substrate resulting in a change in refractive index therein.

The prior art document cited by applicant in the Information Disclosure Statement filed on May 13, 2002, has been considered and made of record. Note the attached initialed copy of form PTO-1449. This document does not disclose or suggest the generation of ultraviolet (UV) light within a substrate in order to cause defects in the substrate resulting in a change in refractive index therein.

Any inquiry concerning the merits of this communication should be directed to Examiner John D. Lee at telephone number (571) 272-2351. The Examiner's normal work schedule is Tuesday through Friday, 6:30 AM to 5:00 PM.
